PERIPHERALS AND POWER SUPPLY

Day 1: Overview of Peripherals

Name: Meghrajsinh Jadeja

Date: 19/10/2026

Topic: Functions of printers, scanners, webcams, and their connection interfaces.

Task 1: Types of Printers, Scanners, and Webcams

A peripheral is a device connected to a computer to help us do a task. Printers give paper copies, scanners make digital copies, and webcams capture video.

Device Type	Simple Function	Real-Life Use Case
Inkjet Printer	Prints using liquid ink.	Printing college assignments and colour pictures.
Laser Printer	Uses toner powder to print quickly.	Printing many office documents.
Dot Matrix Printer	Prints using small pins and an ink ribbon.	Printing bills or multi-copy forms in some shops.
Flatbed Scanner	Scans a page placed on glass.	Scanning certificates or notes.
Handheld Scanner	Scans by moving the scanner over an item.	Scanning barcodes or small documents.
Built-in Webcam	Camera already fitted in a laptop.	Attending online classes.
USB Webcam	External camera connected by USB.	Video calls on a desktop computer.

Task 2: Labeled Diagram — Connecting a Home Printer

Example: A laptop connects to a home printer using a USB cable.

Laptop / PC	USB Cable	Home Printer
Sends the print job	Connection interface: USB	Prints on paper
Select file → Print	Wired connection	Paper + ink/toner

Laptop / PC ——— USB cable (USB interface) ——— Printer

Note: Some printers can also connect through Wi-Fi. In that case, the laptop and printer usually need to be connected to the same Wi-Fi network.

Task 3: Three Peripheral Connection Interfaces

Interface	Advantage	Disadvantage
USB cable	Usually easy to set up and gives a stable connection.	The device must be near the computer and the cable can get in the way.
Wi-Fi	No cable is needed; devices can be in different places in the home.	Needs a working Wi-Fi network and setup may take extra steps.
Bluetooth	Wireless and useful for short-range connections.	Usually has a shorter range and may be slower than USB for some tasks.

Task 4: Steps to Connect a Printer to a Computer

Device selected: USB printer

1. Keep the printer near the computer and connect the printer to a power socket.

2. Switch on the printer and check that paper and ink or toner are available.

3. Connect one end of the USB cable to the printer and the other end to the computer.

4. Wait for the computer to detect the printer. If asked, install the printer driver from the included setup software or the printer maker's official website.

5. Open the computer's Settings and go to Printers & scanners (the wording may differ by operating system).

6. Select the printer and set it as the default printer if needed.

7. Open a document, press Ctrl + P, select the printer, and click Print.

8. Check that the page prints correctly. If it does not, check the cable, power, paper, and ink or toner.

Conclusion

Printers, scanners, and webcams are useful computer peripherals. They connect by USB, Wi-Fi, or Bluetooth. The best connection depends on the device, speed needed, distance, and convenience.
